## History

The Alcántara Bridge is an ancient Roman arch bridge located in Extremadura, Spain. The bridge was built in the 1st century AD, during the reign of Emperor Trajan, and was part of a larger network of roads and bridges that connected the Roman Empire. The bridge's construction was a remarkable feat of engineering, considering the limited technology and resources available at the time. The bridge's design and construction were influenced by the Roman engineering tradition, which emphasized functionality, durability, and aesthetic appeal. The bridge's architects carefully planned and executed the construction of the bridge, using local granite and precise masonry techniques to create a structure that would last for centuries.
